

Planetaire Mono

B612 LETTERFORMS
HACK INFRASTRUCTURE
NERD FONT ICONS

A beautiful, highly legible monospace font
for terminals, editors, and agentic work

Version 0.1.3 · 2026-06-08
github.com/jlevy/planetaire

CREDITS

Planetaire Mono assembled and maintained by **Joshua Levy**
B612 Mono letterforms by **Intactile Design** for **Airbus**
Hack base punctuation, symbols, and metrics by **Chris Simpkins**
Nerd Fonts 12,000+ icons by **Ryan McIntyre**
Dotted zero inspired by the B612 fork by **Carlos Eduardo de Paula**

ABOUT B612

B612 began not as a typeface but as an aviation research program. In 2010 Airbus, ENAC (the French civil aviation university), and the Université de Toulouse III set out to define and validate an “aeronautical font” for cockpit screens: text a pilot can read correctly while fatigued, at oblique angles, or under vibration, glare, or near-darkness.

The shapes were derived experimentally before they were drawn. Jean-Luc Vinot (ENAC) and Sylvie Athènes (Toulouse III) built confusion matrices of when and how characters get misread (“Legible, are you sure?” at CHI 2012). In their controlled study, the prototype that became B612 drew slightly more correct reads than Verdana and clearly outperformed the legacy avionics font. Airbus then commissioned the Montpellier interface studio Intactile Design (Nicolas Chauveau, Thomas Paillot, and Jonathan Favre-Lamarine) to draw the full family of eight variants.

B612 is named for the asteroid home of the Little Prince by Antoine de Saint-Exupéry, who was himself an aviator.

B612’s unusual character is a humanist answer to an instrument-panel problem. Where earlier cockpit fonts went monolinear and rigid, B612 keeps stroke contrast, opens counters, and lengthens ascenders and descenders. Each word’s silhouette resolves quickly. At stroke junctions it carries small notches (light traps) that keep joins from filling in on bright, low-contrast displays. The result has quietly human character quirks that are grounded in measured legibility gains rather than style. In 2017, B612 was released as open source through the Eclipse Polarsys project.

However, B612 alone is not a fully usable document or application font. The versions in circulation, including the one on Google Fonts, have uneven symbol coverage that is awkward for terminal and programming use. And the published version has an undotted zero that is easy to confuse with a capital O.

ABOUT PLANETAIRE MONO

Planetaire Mono arises from this need. It merges B612's letters and digits into Hack Nerd Font's base. It also adds more weights and a dotted zero:

- **B612 letterforms** for letters, digits, and extended Latin, Greek, and Cyrillic.
- **Hack punctuation and symbols** for {}[]()<> and the rest.
- **Ten variants across five weights** (400/500/600/700/800), including added SemiBold (600) and ExtraBold (800) weights, the latter for terminal bold (see Weights).
- **12,000+ Nerd Font icons** (Powerline, Font Awesome, Devicons) in the Extended package.
- **A dotted zero:** B612's zero with a center dot for clear 0 vs O, in circle (default) and rectangle (ss01) variants.

With these changes it has become one of the most beautiful and genuinely functional monospace fonts I've seen. I've used dozens of terminal fonts over the years, and Planetaire Mono is now what I use every day.

Planetaire Typeface Specification

DESIGN

Classification	Monospace (fixed)
Letterforms	B612 Mono (humanist)
Packages	Extended, Text
Styles	10 (5 weights × 2)
Units per em	2000
Advance width	1204 (0.602 em)
Italic angle	0°, true italics

WEIGHTS

Planetaire Text Sample

Planetaire Mono at various sizes, showing B612's distinctive letterforms optimized for readability at small sizes and on low-resolution displays.

The quick brown fox jumps over the lazy dog. Pack my box with five dozen liquor jugs. How vexingly quick daft zebras jump!

In the great void between stars, instruments must be read without error. Every glyph must be unambiguous: the digit 0 distinct from the letter O, the numeral 1 clearly not a lowercase l or uppercase I. B612 was born from this requirement. Originally designed for cockpit displays at Airbus, where a misread character could mean the difference between FL350 and FL850. Planetaire Mono inherits that precision and pairs it with the full symbol coverage a programmer needs: braces, brackets, pipes, arrows, and 12,000 icons ready for a modern terminal.

FRENCH • GERMAN • SPANISH • TURKISH

Les naïfs ægithales hâtifs pondent au zéphyr joyeux. Falsches Üben von Xylophonmusik quält jeden größeren Zwerg. El veloz murciélago hindú comía feliz cardillo y kiwi. Pijamalı hasta yağız şoföre çabucak güvendi.

GREEK

Ξεσκεπάζω τὴν ψυχοφθόρα βδελυγμία.

CYRILLIC

Съешь же ещё этих мягких французских булок, да выпей чаю. Широкая электрификация южных губерний даст мощный толчок подъёму сельского хозяйства.

Planetaire Iconic Texts

ALAN TURING · "COMPUTING MACHINERY AND INTELLIGENCE" (1950)

I propose to consider the question, "Can machines think?" This should begin with definitions of the meaning of the terms "machine" and "think." The definitions might be framed so as to reflect so far as possible the normal use of the words, but this attitude is dangerous. If the meaning of the words "machine" and "think" are to be found by examining how they are commonly used it is difficult to escape the conclusion that the meaning and the answer to the question, "Can machines think?" is to be sought in a statistical survey such as a Gallup poll. But this is absurd.

Title: **Host Software**
Author: **Steve Crocker**
Installation: UCLA
Date: 7 April 1969
Network Working Group Request for Comment: 1

Introduction

The software for the ARPA Network exists partly in the IMPs and partly in the respective HOSTs. BB&N has specified the software of the IMPs and it is the responsibility of the HOST groups to agree on HOST software.

During the summer of 1968, representatives from the initial four sites met several times to discuss the HOST software and initial experiments on the network. There emerged from these meetings a working group of three, Steve Carr from Utah, Jeff Rulifson from SRI, and **Steve Crocker** of UCLA, who met during the fall and winter. The most recent meeting was in the last week of March in Utah. Also present was Bill Duvall of SRI who has recently started working with Jeff Rulifson.

Somewhat independently, Gerard DeLoche of UCLA has been working on the HOST-IMP interface.

I present here some of the tentative agreements reached and some of the open questions encountered. Very little of what is here is firm and reactions are expected.

I. A Summary of the IMP Software

Messages

Information is transmitted from HOST to HOST in bundles called messages. A message is any stream of not more than 8080 bits, together with its header. The header is 16 bits and contains the following information:

Destination	5 bits
Link	8 bits
Trace	1 bit
Spare	2 bits

The destination is the numerical code for the HOST to which the message should be sent. The trace bit signals the IMPs to record status information about the message and send the information back to the NMC (Network Measurement Center, i.e., UCLA). The spare bits are unused.

Planetaire Code Specimen: microGPT

Andrej Karpathy's microGPT: a complete GPT training loop and inference engine in 200 lines of pure Python.

```
"""
The most atomic way to train and run inference for a GPT in pure, dependency-free Python.
This file is the complete algorithm.
Everything else is just efficiency.

Planetaire Provenance and License

Source Fonts

B612 Mono	Designed by Intactile Design for Airbus. Optimized for legibility in cockpit displays. Planetaire Mono takes its letters (A-Z, a-z), digits 0-9, and extended Latin/Greek/Cyrillic glyphs from B612. The zero glyph receives a center dot in post-processing for O/0 disambiguation, with circle (default) and rectangle (ss01) variants.
Hack	Chris Simpkins' typeface designed for source code. Provides the base font structure: punctuation, symbols, metrics, and Nerd Font integration.
Nerd Fonts	Ryan McIntyre's icon patching project. 12,000+ developer icons including Powerline, Font Awesome, Devicons, Material Design, and more, all included via the Hack Nerd Font base.

Build Pipeline

Planetaire Mono is built with a custom Python pipeline using fontTools. For each weight variant, the pipeline loads Hack Nerd Font as the base, merges B612 letter and digit glyphs by Unicode range, adds a center dot to B612's zero for O/0 disambiguation, renames the result, and applies post-processing fixes. Medium and SemiBold weights are generated from Regular, and ExtraBold from Bold, via FontForge emboldening.

Two Packages: Extended and Text

Planetaire Mono ships in two packages built from the same letterforms:

- **Planetaire Mono Extended:** the full build with all ~12,000 Nerd Font icons and Powerline, for terminals and coding.
- **Planetaire Mono Text:** a lightweight web subset (letters, punctuation, box-drawing, block elements, geometric shapes) that drops the Private-Use icons. About **55 KB per weight** in WOFF2, roughly 18× smaller, and shipped with a ready `@font-face` stylesheet.

License

Planetaire Mono is released under the **SIL Open Font License 1.1 (OFL-1.1)**.

The OFL allows free use, modification, and redistribution of the font, including in commercial products, provided that modified versions are not sold by themselves and carry a different name.

The constituent fonts carry the following licenses:

- **B612 Mono:** SIL Open Font License 1.1 and Eclipse Public License 2.0
- **Hack:** MIT License
- **Nerd Fonts** patches: MIT License

Spacing Review

Planetaire Mono is built to a single cell width: every glyph (and intentional double-width glyphs at exactly 2x) shares one advance. B612's letters and the FontForge-emboldened weights are normalized to that cell, recentered, and condensed only where ink would otherwise bleed. The two panels below are the visual proof. Review them to confirm no glyph is trimmed and all weights align.

STANDARD CODING CHARACTERS: TRUE CELL WIDTHS

Red rules mark each glyph's advance. Equal-width cells with ink inside mean a clean monospace grid, nothing trimmed.

A|B|C|D|E|F|G|H|I|J|K|L|M|N|O|P|Q|R|S|T|U
V|W|X|Y|Z

a|b|c|d|e|f|g|h|i|j|k|l|m|n|o|p|q|r|s|t|u
v|w|x|y|z

0|1|2|3|4|5|6|7|8|9

!|"|#|\$|%&|'|(|)|*|+|,|-|.|/|:|;|<|=|>|?|@

[|\]|^_|`{|}|}~

Cell-filling glyphs (box-drawing, powerline) reach the rules by design:

STANDARD CODING CHARACTERS: TRUE CELL WIDTHS (ITALIC)

Red rules mark each glyph's advance. Equal-width cells with ink inside mean a clean monospace grid, nothing trimmed.

[\] ^ _ ` { | } ~

Cell-filling glyphs (box-drawing, powerline) reach the rules by design:

WEIGHT ALIGNMENT: EVERY WEIGHT IS THE SAME WIDTH

The same string in all ten variants; the red rule marks each line's right edge. A single vertical line means identical width across every weight.
